NOVEMBER 2019 – JANUARY 2020 | SEPTEMBER 2022 – DECEMBER 2022

- Worked with professional analysts in Quality Assurance Laboratory in analyzing and rectifying customer oriented complaints & reviews, to meet the required standard.

PROJECTS

QUIZZICAL (Quiz App) – Built a 2-paged quiz app with **React.Js** & **TailwindCss** that fetches data from the Open Trivia API, calculates the total number of right answers selected and displays it as the user's score, as well as displays the correction (highlights correct & wrong options in different Color).[Preview Site.](#)

MOVIE WATCHLIST APP – I developed a multi-page movie-watch-list app with **HTML, TailwindCss & JavaScript,** which upon title-search by the user, fetches a number of movies from an external source. However, the user has the liberty of saving their preferred movie, to their watch-list page. The Watch-list page holds each movie being saved from the search page in localStorage, and renders it upon every load or reload. The user also has the option of removing movies from the watch-list.   [Preview Site.](#)
